

SON 28 15 disc, additional notes

SON 28 15 disc for 15 mm suspension forks is designed for off-road use, but not for Downhill biking.

Dimensions and electrical properties correspond with standard SON 28 ISO disc 6-bolt. Please follow the SON 28 instructions with regard to lacing wheels, connecting headlights and rear lights as well as care and maintenance.

The SON 28 15 is made with a hollow axle of 15 mm inner diameter as opposed to standard SON 28 that has a hollow axle for quick release mount. Standard OLD for 15 mm axles is 100 mm.

Fix the hub in the fork with the axle that belongs to the fork in the same way as you do with a hub without dynamo according to the instructions of the fork manufacturer. Just mind a suitable direction of the connections. The well-mounted hub must fit tightly in the fork. If not so, you will hear a rattling noise when spinning the wheel.

Radial spoke lacing is not permitted.
